- ☐ npm : Node Package Manager
- ☐ npx : Node Package Executor
- ☐ nvm : Node Version Manager

To create react-app

Option 1

- ☐ `npx create-react-app [app-name]`
  - ☐ If it fails, first try: `npm -g uninstall create-react-app [app-name]`, then execute above command.

Option 2

- ☐ `npm init react-app [app-name]`

Option 3

- ☐ `npm init react-app [app-name]`
- ☐ Add `node_modules/` to .gitignore.
  - ☐ Or just copy the .gitignore file from the project created by .gitignore in the project one.

Importing modules in react

- ☐ If in documentation, its written,
  - ☐ var package = require('package') => import package from 'package'
  - ☐ var {package} = require('package') => import {package} from 'package'

List of Useful Libraries
